Initial update from debrief:

4 people in the hot zone. 3 are unresponsive. 1 is "unaccounted for"
The rest of the site has just been pronounced all clear.
The only site still in decontamination is the hot zone. A site where a insecticide is made. This is where the release occurred. No explosion.
Medical personnel are waiting for the zone to be decontaminated before the they can attend to the 3 unresponsive. The general consensus around here is the release didn't make it to the closest neighborhood over a mile away.
Air monitoring hasn't picked up any detections.
No official word as to caused the release.
